- Supports Digestion, Performance, And Appearance
- Added Fat Helps Maintain Body Condition
- Supports Topline
- Promotes Hoof Growth
- Helps Support Digestibility

MINIMUM FEEDING RATE

Recommended minimum feeding rates are found by matching the current body weight and the status of the horse in the table below.

| EXPECTED MATURE HORSE WEIGHT | 250 lb | 500 lb | 1,000 lb | 1,500 lb | 2,000 lb |
|-----------------------------------|------------|------------|-------------|-------------|-------------|
| MAINTENANCE/LAY UP | 2.0 | 3.5 | 7.5 | 11.0 | 14.5 |
| LIGHT EXERCISE/WEIGHT GAIN | 2.5 | 4.5 | 9.0 | 13.5 | 18.0 |
| MODERATE EXERCISE | 3.0 | 6.0 | 11.5 | 17.5 | 23.0 |

Feed hay/pasture at a rate of 1-1.5% of body weight daily. Feeding rates for mature weight and status are minimum pounds/day for that horse. Amount can be increased if extra body weight is needed. Make a mash or soup if horse has difficulty chewing or swallowing feed. Feed pelleted, chopped, or cubed hay as chewing ability declines, or provide adequate pasture. Consult with a veterinarian or nutritionist for a recommended diet.
